

Bed bugs treatment

Before treatment

Prepare all room(s) that require spraying

- Strip all the beds in the room or rooms that need spraying.
- Empty any drawers in the bed if it has them.
- Move any furniture that can be moved easily away from the walls so we can spray the skirting boards (do not move heavy furniture).
- Empty any wardrobes if you want them sprayed.
- Cover aquariums or fish bowls with a cloth.
- Clear the floor area, especially under the beds.
- Vacuum thoroughly as it is not recommended that you undertake any vacuuming for 2 to 3 weeks after treatment in order to allow it to take effect.

After treatment

- Do not vacuum for 2 to 3 weeks to allow the treatment to take effect.
